## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Watanabe (US patent application publication 2004/0156294, cited by applicant) in view of Senshu (US patent application publication 2002/0060968, cited by applicant).

References are made to the reasoning set forth in last office action.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to

Art Unit: 2627

be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 5, 6 and 41 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5, 7-19, 21-25 and 35-61 of copending Application No. 10/645,566. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1, 5, 6, 41 of present application are similar but broader than claims 1-5, 7-19, 21-25 and 35-61 of copending application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

### ***Allowable Subject Matter***

Amended claim 42 is allowed.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1 and 5, filed on 9/8/2008 have been fully considered but they are not persuasive.

With respect to claim 1 and 5, examiner still believes that Watanabe disclose a high density recording medium including one or more recording layers, the recording medium comprising: a head-in area including a disk information required for recording

or reproducing data on or from the recording medium(elements 21 and 22 in fig. 18) and a burst cutting area located at an inner area other than the lead-in area, the burst cutting area including a plurality of data units (element 11 in Fig 18), where the plurality of data units are located on different layers.

Watanabe discloses the claimed invention except for the "where each data unit being composed of 16 information data and 16 parity data and the disk information being included in 16 information data of at least one data unit.

However in the same field of endeavor, Senshu discloses where each data unit consists of data of 4 row and an information of 4 bytes , and parity of 4 rows and a carrier field of 4 bytes (ECC rows are equivalent to parity rows).

Therefore it would have been obvious to one of ordinary skill in the art to modify the recording medium of Watanabe with the data format of Senshu.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 2627

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
